DESCRIPTION

The CC16WP belongs to our 32-bit CAN I/O generation. 8 current-controlled PWM outputs and 6 multifunction inputs enable, among other things, a switchable pull-up resistor (1 kΩ) and a switchable current sink (330 Ohm). The compact CAN controller has 1 CAN interface, optionally also CAN FD capable. The 2nd interface can be used as LIN, 2nd CAN or RS232 interface.

TECHNICAL DATA

Housing	Waterproof, sealed plastic housing
Connector	Delphi / Aptiv - 211PC249S0033
Weight	173 g
Temperature range acc. to ISO 16750-4	-40 °C...85 °C
Environmental protection acc. to ISO 20653	IP6K8 in the correct installation position (plug down) and when using the protection cap and corrugated tube acc. to the accessories list CAUTION! Follow the mechanical instructions!
Current consumption	26 mA at 24 V 45 mA at 12 V
Over-current protection	1 A + Load
Total Inputs and outputs	15 (7 analog inputs; 8 I/O's [PWM capable, integrated current measurement INA]; depending on assembly options 2nd CAN bus, LIN bus or 2 additional digital inputs)
Inputs	Configurable as: Analog input 0...16 V, switchable to 0...32 V Digital input Frequency input Current input (330 Ω against GND) 1 kΩ pull up against V _{Ref}
Outputs	Configurable as: Digital, positive switching PWM output
Supply voltage	9...32 V only if sensor supply is 5 V (Code B at 12 V, Code E at 24 V, Code F at variant 1.154.211.00, acc. to ISO 16750-2); otherwise 12.2...32 V (Code F, acc. to ISO 16750-2)
Starting voltage	9 V (see supply voltage)

TECHNICAL DATA (CONTINUED)

Overvoltage protection	≥ 33 V
Quiescent current	25 μA at 12 V and 24 V
Reverse polarity protection	yes
CAN interface	ISO 11898-2 capable CAN bus transceiver, CAN-FD capable, see assembly variants
LIN interface / RS232	Depending on assembly options

REGULATORY APPROVALS AND TESTING

E1 approval	ECE R10 06 8747
Electrical tests	Acc. to ISO 16750-2 or -4: Short circuit protection (without: RS232 interface) Reverse polarity Interruption pin and connector Overvoltage at T _{ma} x-20 °C Storage Test at T _{max} and T _{min} Operation Test at T _{max} and T _{min} Starting profile (form. pulse 4 acc. to ISO 7637) Load Dump Test B at 24 V (R ₁ =4Ω) Acc. to ISO 7637 - 2: pulse 1, 2a, 2b, 3a, 3b Acc. to ISO 10605: ESD up to ± 15 kV Bulk current injection acc. to 11452-4: 3. Ed. 2005 + Corr. 1 2009 up to 100 mA Free field (ISO 11452-2:2 ed. 2004) up to 100 V/M

SOFTWARE/PROGRAMMING

Programming System

MRS APPLICS STUDIO

The Applics Studio is the new development and tool platform for our assemblies. Program your MRS controls quickly and easily with our stand-alone software. The focus is on your application.

INPUT FEATURES - SUMMARY

Pin A3, A4, A5, A6, B6, C4	Programmable as analog or digital input	Resolution	12 Bit	Pin B1, B8, C1, C2, C3, C6, C7, C8	Programmable as analog or digital input	Resolution	12 Bit
Voltage input 0...16 V (see A) ¹	Input resistance	40 kΩ		Voltage input 0...32 V (see E) ¹	Input resistance	30 kΩ	
	Input frequency	$f_g^2 = 170$ Hz			Input frequency	$f_g^2 = 280$ Hz	
	Accuracy	≤ 3 %			Accuracy	≤ 3 %	
	Conversion factor	4.16 mV ≈ 1 digit					
Voltage input 0...32 V (see B)	Input resistance	36 kΩ		Pin B3	Programmable as analog or digital input	Resolution	12 Bit
	Input frequency	$f_g^2 = 340$ Hz					
	Accuracy	≤ 3 %					
	Conversion factor	8.08 mV ≈ 1 digit					
Frequency input (see D) ³	Input resistance	40 kΩ		Voltage input 0...16 V (see A) ¹	Input resistance	34 kΩ	
	Turn-on threshold	3.7 ± 0.3 V			Input frequency	$f_g^2 = 160$ Hz	
	Turn-off threshold	2.0 ± 0.3 V			Accuracy	≤ 3 %	
	Min. pulsewidth	50 μs					
	Meas. range PWM	5-95 %					
	Accuracy	≥ 8 Hz and ≤ 10 kHz max. ± 3 %					
Current input 0...24.5 mA (see C)	Input resistance	330 Ω against GND					
	Conversion factor	78.7 digits/mA					
Sensor input (see E)	Input resistance	1 kΩ against A7 (sensor supply)					
Pin A2, B2 (depending on assembly options)	Programmable as digital input	Resolution	12 Bit				
Digital input Positive (see G)	Input resistance	22.7 kΩ					
	Turn-on threshold	6 V					
	Turn-off threshold	4.8 V					
	Min. pulse width	≥ 20 ms measured at 500 kbaud					
Pin B5 (KL15)	Programmable as digital input	Resolution	12 Bit				
Digital input Positive	Input resistance	22.1 kΩ					
	Turn-on threshold	5.8 V					
	Turn-off threshold	4.6 V					

¹standard configuration²Cutoff frequency (-3 dB), measured with 0-10 V_{Peak}³when standard configuration is used

OUTPUT FEATURES - SUMMARY

Pin B1, B8, C1, C2, C3, C6, C7, C8	Protective circuit for inductive loads	Integrated
	Wire fault diagnostics	Possible via current sense
	Short circuit diagnostics	Possible via current sense
Digital, positive switching (high side; see E) including INA current sense	Switching voltage	9-32 V DC
	Switching current	see table
Accuracy INA293 current sense(for measuring ≤ 100 mA use the calibrated current value with function: <code>calibr_get_value()</code>)	Accuracy INA293	1 Digit ≈ 1 mA
	for 100 mA $\geq 3\% \geq 1$ A	
PWM output (see E)	Output frequency	10 Hz - 1 kHz
	Resolution	1 ‰
	Switching current	see table
Short circuit protection against GND and U_B	Internal overtemperature protection, latch-off can be realized by software application	
Overload protection	Internal overtemperature protection, latch-off can be realized by software application	

PWM channels

ACCESSORIES

Description	Order Number
Applis Studio Bundle	1.100.200.00
Cable set CC16WP for programming	110490
Connector package CC16WP	110421
PCAN-USB FD Interface	503750
Protection cap	111441
Corrugated tube (outer diameter: 21.2 mm; inner diameter: 16.5 mm)	Available from independent retailers

On request also available with matching DEUTSCH DT plug

Your advantages:

- High reliability and robust quality
- Use in extreme temperatures and high humidity

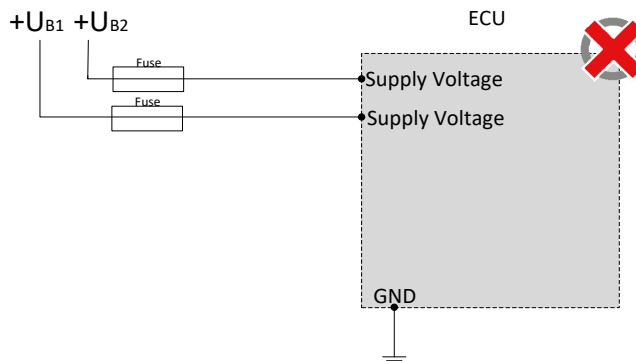

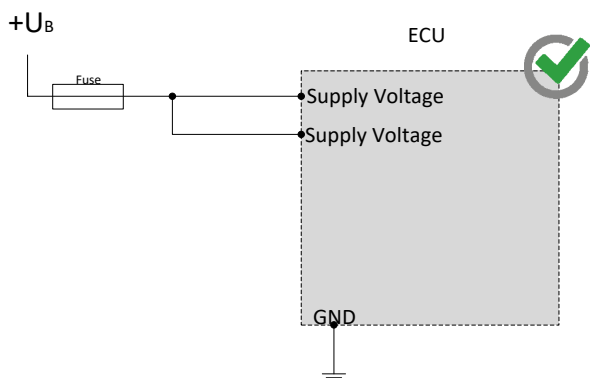

MANUFACTURER

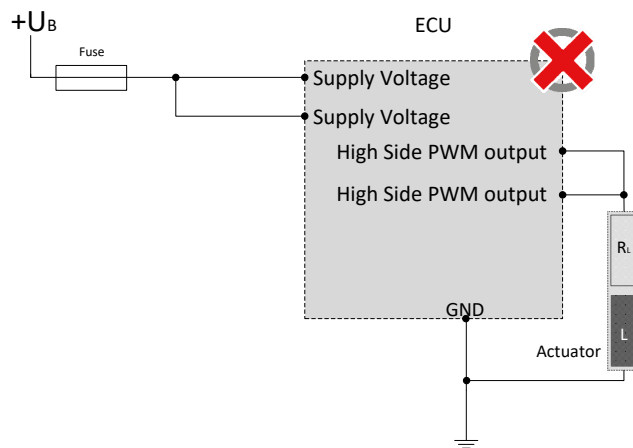

MRS Electronic GmbH & Co. KG
Klaus-Gutsch-Str. 7
78628 Rottweil

NOTES ON WIRING AND CABLE ROUTING

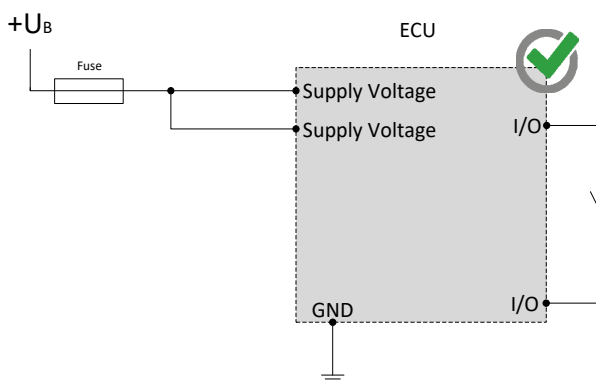

The electronic system and the power outputs of a control unit must be supplied by the same power supply system.

PWM outputs may not be connected with each other or bypassed.

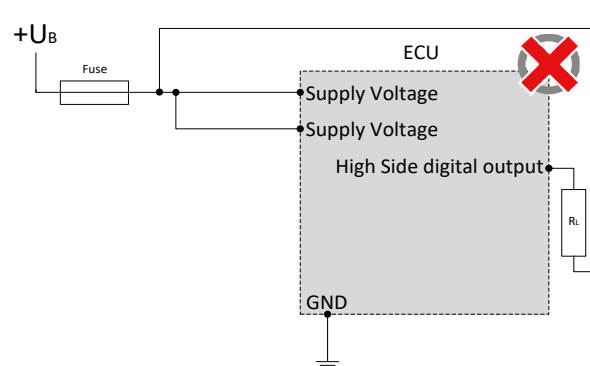

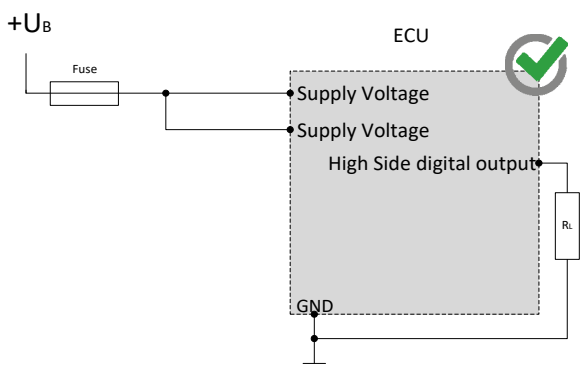

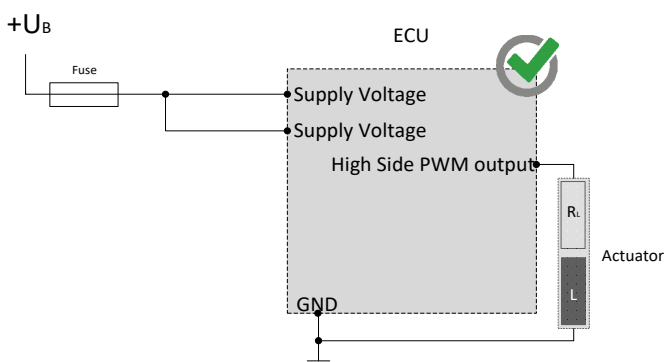

The pins (I/Os) can be used in combination and may not be switched externally against a higher voltage level than supply voltage.

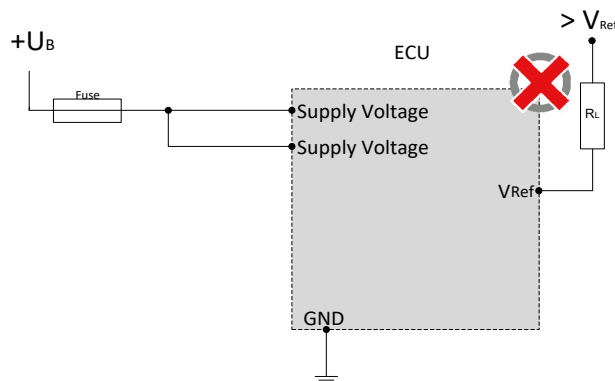

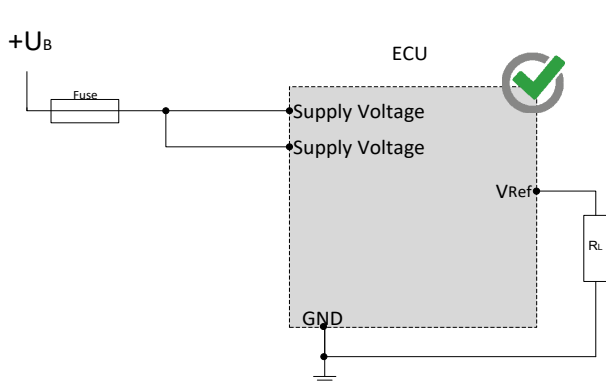

NOTES ON WIRING AND CABLE ROUTING

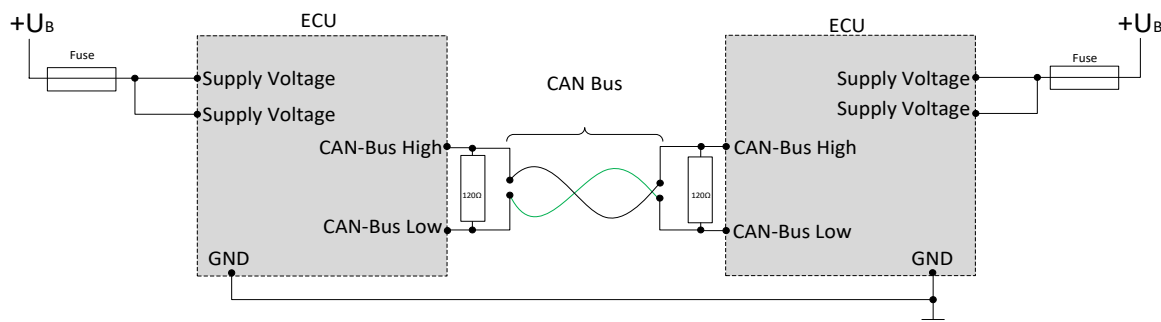

Hightside outputs may only be switched to ground.

The sensor supplies can be "lifted" through an external circuitry, for example the creation of higher voltage, as they only work as a voltage source but not as voltage drain. The lift of a voltage source may lead to unforeseen malfunctions and damages of the control unit in case of permanent operation.

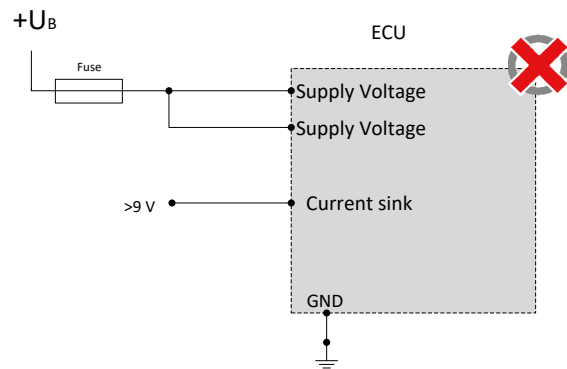

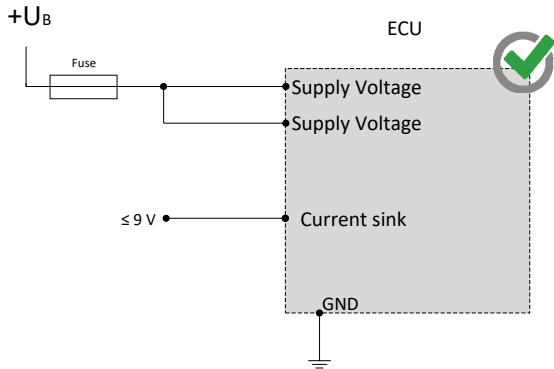

CAN bus communication is the main communication between the control unit and the vehicle. Therefore, connect the CAN bus with special care and check the correct communication with the vehicle to avoid undesired behavior.

NOTES ON WIRING AND CABLE ROUTING

When using the input with pull-down resistance (using DOM_PD), you must not connect a greater voltage than 9 V to the input.

To comply with the IP protection class, the wiring harness attached to the mating connector must be routed through the corrugated tube and the mating connector must be connected to the control unit. The protection cap is then closed over the mating connector and the corrugated tube.

SAFETY AND INSTALLATION INFORMATION

It is essential to read the instructions in full thoroughly before working with the device.

Please note and comply with the instructions in the operating instructions and the information in the device data sheet, see www.mrs-electronic.com

Staff qualification: Only staff with the appropriate qualifications may work on this device or in its proximity.

SAFETY

WARNING! Danger as a result of a malfunction of the entire system.

Unforeseen reactions or malfunctions of the entire system may jeopardise the safety of people or the machine.

- Ensure that the device is equipped with the correct software and that the wiring and settings on the hardware are appropriate.

WARNING! Danger as a result of unprotected moving components.

Unforeseen dangers may occur from the entire system when putting the device into operation and maintaining it.

- Switch the entire system off before carrying out any work and prevent it from unintentionally switching back on.
- Before putting the device into operation, ensure that the entire system and parts of the system are safe.
- The device should never be connected or separated under load or voltage.

CAUTION! Risk of burns from the housing.

The temperature of the device housing may be elevated.

- Do not touch the housing and let all system components cool before working on the system.

PROPER USE

The device is used to control or switch one or more electrical systems or sub-systems in motor vehicles and machines and may only be used for this purpose. The device may only be used in an industrial setting.

WARNING! Danger caused by incorrect use.

The device is only intended for use in motor vehicles and machines.

- Use in safety-related system parts for personal protection is not permitted.
- Do not use the device in areas where there is a risk of explosion.

Correct use:

- operating the device within the operating areas specified and approved in the associated data sheet.
- strict compliance with these instructions and no other actions which may jeopardise the safety of individuals or the functionality of the device.

Obligations of the manufacturer of entire systems

It is necessary to ensure that only functional devices are used. If devices fail or malfunction, they must be replaced immediately.

System developments, installation and the putting into operation of electrical systems may only be carried out by trained and experienced staff who are sufficiently familiar with the handling of the components used and the entire system.

It is necessary to ensure that the wiring and programming of the device does not lead to safety-related malfunctions of the entire system in the event of a failure or a malfunction. System behaviour of this type can lead to a danger to life or high levels of material damage.

The manufacturer of the entire system is responsible for the correct connection of the entire periphery (e.g. cable cross sections, correct selection/connection of sensors/actuators).

Opening the device, making changes to the device and carrying out repairs are all prohibited. Changes or repairs made to the cabling can lead to dangerous malfunctions. Repairs may only be carried out by MRS.

Installation

The installation location must be selected so the device is exposed to as low a mechanical and thermal load as possible. The device may not be exposed to any chemical loads.

Install the device in such a manner that the plugs point downwards. This means condensation can flow off the device. Single seals on the cables/leads must be used to ensure that no water gets into the device.

Putting into operation

The device may only be put into operation by qualified staff. This may only occur when the status of the entire system corresponds to the applicable guidelines and regulations.

FAULT CORRECTION AND MAINTENANCE

NOTE The device is maintenance-free and may not be opened.

- If the device has damage to the housing, latches, seals or flat plugs, it must be taken out of operation.

Fault correction and cleaning work may only be carried out with the power turned off. Remove the device to correct faults and to clean it.

Check the integrity of the housing and all flat plugs, connections and pins for mechanical damage, damage caused by overheating, insulation damage and corrosion. In the event of faulty switching, check the software, switches and settings.

Do not clean the device with high pressure cleaners or steam jets. Do not use aggressive solvents or abrasive substances.
